

Internal Pelmet

The internal pelmet is formed from a steel ladder framework and creates a room-like look. It also boosts the thermal performance and provides a space for lights or cables.

The internal pelmet allows you to enjoy the natural light of a conservatory, but also gives a feel of being in an extension.

Can be retro fitted to existing conservatories..

The pelmet is finished with plasterboard ready to be plastered and painted.

Cavity provides insulation and can be boosted by adding extra wool fibre insulation.

The internal pelmet is an engineered steelwork ladder system.

Gutter cover adds style and shape to the roofline for the perfect finishing to a standard conservatory.

The gutter cover simply fixes to the eaves beam of the Wendland roof system.

Internal Pelmet

Features and benefits

- Can be used from 5° to 40°
- Steelwork ladder system extends from 300mm to 1200mm
